### About

This repository contains a simple step-by-step guide for deploying a Next.js project to GitHub Pages. It is designed for developers looking to host static Next.js sites with minimal configuration. By following this guide, you can deploy your Next.js app to GitHub Pages with ease. Feel free to contribute or open issues if you face any problems.

General

Repository name: Next.js-project-to-GitHub-Pages [Rename]

**Template repository**  
Template repositories let users generate new repositories with the same directory structure and files. [Learn more about template repositories.](#)

**Require contributors to sign off on web-based commits**  
Enabling this setting will require contributors to sign off on commits made through GitHub's web interface. Signing off is a way for contributors to affirm that their commit complies with the repository's terms, commonly the [Developer Certificate of Origin \(DCO\)](#). [Learn more about signing off on commits.](#)

Default branch

The default branch is considered the "base" branch in your repository, against which all pull requests and code commits are automatically made, unless you specify a different branch.

main [Edit]

Social preview

Upload an image to customize your repository's social media preview. Images should be at least 640x320px (1280x640px for best display). [Download template](#)
